

Silgan White Cap MFB TS

Electrical requirements

230 V
50 Hz
100 W

Compressed air

5 bar min.

The Silgan White Cap MFB TS dud detector ensures contact-free vacuum testing with inductive sensors. Jars with insufficient or no vacuum are rejected after a defined distance, even when line speeds vary automatically. In addition, the system includes programmable line control and a shut-down function for a chosen output quantity and the ejection of several jars in a row.

Features:

- Capacitive Touch Panel
- Sensor display for correct spacing
- Display to indicate current vacuum values and defaults
- Missing cap detector
- Precise vacuum check based on closure panel drawn-in
- Output and reject counter (also displayed as a percentage)
- Externally evaluated counter pulses
- Reject pulses of external test functions such as filling level control and flawed packaging
